## EXPERIENCE

### Clutter — *Cofounder*

November 2017 - Present

Spearheaded a consulting startup that teaches individuals how to declutter, organize, and maintain their personal space

Installed Devise to authenticate and verify user input, and set up automated email messaging through the Sendgrid delivery service

Implemented Active Admin to create a backend user interface so team members could navigate and filter through persisted records

### Bear Founders — *Full Stack Developer*

August 2017 - November 2017

Designed a responsive landing page using Bootstrap components and jQuery effects that enhanced the overall user interface and experience

Integrated python scripts of student, startup, and opportunity models into JSON fixtures in order to load each model class with initial data

### Yup Technologies — *Quality Assurance Analyst*

September 2015 - May 2016

Instructed and managed 25 experienced Senior Tutors through the Operations Team for an on-demand mobile tutoring service

Developed tutoring templates and grading guidelines to show tutors how to effectively keep students engaged on a mobile platform

Generated weekly tests and variance reports by creating and executing custom JavaScript spreadsheet functions through Google Apps Script

## EDUCATION

### Bloc, Inc. — *Software Engineering*

June 2015 - May 2018

### University of California, Riverside — *B.S. Business Admin*

September 2009 - June 2013

## ACTIVITIES

### Startup Weekend

February 10 - 12, 2017

Joined a passionate group of entrepreneurs to help accelerate the development of mockups for an educational mobile platform where counselors can guide high school students throughout the college application process

### Amazon Alexa

August 2016 - December 2017

Participated in the Hackster.io Amazon Alexa API Mashup Contest by creating a voice-enabled skill called FantasyMetrix, which queries past and present statistics along with advanced metrics derived from NFL players using the Yahoo Fantasy Sports API

## SKILLS

Ruby, Rails, Node.js, JavaScript, AWS, PostgreSQL, Django, Python, React, jQuery, Bootstrap, Heroku

## HOBBIES

Settlers of Catan, Fantasy Football, Hip Hop, Poker, Soccer, Ping Pong, Halo, Machine Learning, Wag!
